SUMMARY

QA Engineer with 4 years of experience in manual and automated testing of web applications, Android and iOS mobile apps, and REST APIs, including enterprise platforms for Deutsche Telekom. Builds and maintains test automation with Playwright, Selenium (Selenide), Cypress and RestAssured, including a Selenide and TestNG framework designed from scratch. Validates data in MySQL and debugs API traffic with Chrome DevTools. Recently built an AI-powered regression impact tool with Claude, GitHub and Jira to support risk-based testing. Experienced in Agile/Scrum teams and weekly production releases.

EXPERIENCE

DevOps Africa Limited, Accra, Ghana - *QA Engineer*

September 2025 - Present

AI-Powered Regression Impact Analysis and Risk Assessment

- Designed and built a Claude-powered tool that analyses source-code changes and flags regression risks across interconnected system components.
- Integrated GitHub and Jira to link tickets, code changes and system dependencies, showing QA the potential blast radius of each change.
- Used GitHub Actions to inspect deployment workflows and confirm which changes had reached the QA environment.
- Delivered it as a read-only workflow that gives the team clearer regression visibility and supports risk-based testing decisions.

Inventory Management System for PurpleWave Auction

- Write and maintain Playwright end-to-end tests for listing workflows in a shared monorepo, extending coverage while keeping the system stable.
- Test REST APIs with Postman, validating request and response structures, status codes and error handling across multiple endpoints.
- Query the MySQL database to verify that listing data is stored and updated correctly after UI and API actions.
- Run SQL injection tests on input fields and API parameters to confirm malicious queries cannot expose extra data or modify database records.
- Use Chrome DevTools (Network tab) to inspect API requests and responses, isolating whether a defect sits in the frontend or the backend.
- Perform integration testing and validate implemented features ahead of weekly production deployments.

AmaliTech, Takoradi, Ghana - *QA Engineer*

November 2022 - August 2025

Onboarding Application for Deutsche Telekom (Admin Web Portal, Flutter Web and Mobile App)

- Designed and built a Selenide and TestNG test automation framework from scratch for the admin web portal, automating key user journeys and interface behaviour.
- Automated REST API tests with RestAssured to validate the endpoints behind the onboarding flows.
- Performed manual testing of iOS and Android onboarding flows to ensure a seamless new-hire experience.
- Verified that the Flutter web and mobile apps met functional requirements across platforms.
- Used GitHub Copilot to speed up test scaffolding and assertion boilerplate.

Content Management System for Deutsche Telekom (Global Careers Platform)

- Tested a global careers platform for one of Europe's largest telecom providers across regions, browsers and devices.
- Ran accessibility and performance audits with Google Lighthouse, helping the team meet corporate and EU compliance standards.
- Performed cross-browser and mobile compatibility testing on LambdaTest.
- Built and maintained visual regression tests to catch UI inconsistencies before deployment.
- Used ChatGPT to generate and review complex edge-case test scenarios, widening test coverage.

Compliance Questionnaire Management System

- Executed regression testing to confirm system stability after new features were integrated.
- Documented test results, defects and progress in clear reports for stakeholders and project teams.

EDUCATION

University of Mines and Technology, Ghana

BSc Computer Science and Engineering

September 2018 - November 2022

SKILLS

Test automation: Playwright, Selenium (Selenide), Cypress, RestAssured, Supertest, TestNG

API testing: REST APIs, Postman, Chrome DevTools

Databases: MySQL, MongoDB (self-taught)

Programming: Java

Cross-browser and quality: BrowserStack, LambdaTest, Google Lighthouse, visual regression testing

Tools and CI: Jira, Xray, Confluence, Git, GitHub Actions

Testing types: Manual, functional, regression, integration, end-to-end, API, mobile (Android and iOS), cross-browser, accessibility, performance, security (SQL injection)

Process: Agile/Scrum, requirements analysis, test planning, test strategy, test case design, defect tracking

AI tools: Claude, GitHub Copilot, ChatGPT

LANGUAGE

English (Fluent)
